

_____ Clean/Pluck ears

Additional charges will be incurred for elective procedures

Pre-Anesthetic Bloodwork:

We require a blood screening for all animals receiving anesthesia for any purpose. The blood screen checks for anemia, infections, organ function, parasites, and sugar levels. This laboratory testing helps us identify possible underlying abnormalities that could potentially add to the risk involved for your pet.

Pain Management:

Pain medication will be administered prior to, as well as after surgery. This will help manage post-operative discomfort up to 24 hours following their procedure. To ensure your pet's continued comfort following surgery, additional pain medicine will be sent home.

Thank you for allowing us the privilege of caring for your pet. We take every precaution possible to minimize any anesthetic risks. However, anesthesia always carries an inherent risk and adverse events can occur. Please read the following paragraph and sign below:

I consent to the administration of any anesthetic agents deemed necessary for the surgical procedure or treatment being performed. I understand that there are risks involved. I hereby certify that I have read and fully understand this release. I also assume financial responsibility for all charges incurred and agree to pay all such charges at the time of release of the patient.
